CS 70 Discrete Mathematics and Probability Theory Summer 2023 Huang, Suzani, and Tausik

DIS 0C

1 Perfect Square

(a) Prove that if n^2 is odd, then n must also be odd.

(b) Prove that if n^2 is odd, then n^2 can be written in the form 8k + 1 for some integer k.

2 Pebbles

Note 2

Note 2

Suppose you have a rectangular array of pebbles, where each pebble is either red or blue. Suppose that for every way of choosing one pebble from each column, there exists a red pebble among the chosen ones.

Prove that there must exist an all-red column.

3 Numbers of Friends

Prove that if there are $n \ge 2$ people at a party, then at least 2 of them have the same number of friends at the party. Assume that friendships are always reciprocated: that is, if Alice is friends with Bob, then Bob is also friends with Alice.

CS 70, Summer 2023, DIS 0C

(Hint: The Pigeonhole Principle states that if n items are placed in m containers, where n > m, at least one container must contain more than one item. You may use this without proof.)
